speed. Light weight, great comfort. Nugema® shell, thermoplastic alloy with greater impact resistance and durability. This mixture shows a synergistic effect resulting from excellent impact resistance. Nugema® thermoplastic has an excellent hardness at any temperature, which makes it ideal for a product that will face a wide range of temperatures during its useful life. Superior protection for your head. The Street Track visor, for daytime use only, is thermoformed, a technique almost exclusively used by NZI Helmets. Several advantages are evident: thermoformed visors are superior in flexibility and resistance to breakage with lower thicknesses (less weight of the whole) and have a greater degree of light transmission (the amount of light that passes through the material). A strip at the back ensures the fixing of the optional glasses.
